Clasificación de movimientos de la mano usando sensor MyoWare y el Classification Learner Toolbox de Matlab

Estudiantes:

- Hernán Campos
- Jean Mejia

Características del experimentos:

- 1-Cerrar 2 veces la mano
- 2-Apuntar con el dedo índice
- 3-Símbolo de paz y amor
- 4-Pulgar arriba
- 5-Hacer puño
- 6-Descanso

Características del hardware:

- Frecuencia de muestreo: 100Hz
- Sensor MyoWare

Referencias:

- Funciones de Matlab: https://github.com/vasanza/Matlab_Code
- Señales Electromiografícas: https://github.com/vasanza/EMG-Wearable

Notas para el uso:

- Se recomienda organizar los datos en la carpeta "data" y las funciones en la carpeta "src".
- Para ejecutar el codigo principal "main.mlx", poner el current folder en la misma ubicación.
- En el siguiente enlace se puede revisar como fue desarrollado el presente codigo:
- https://youtu.be/UI7Oa1sXEeY

1- Load Raw Data

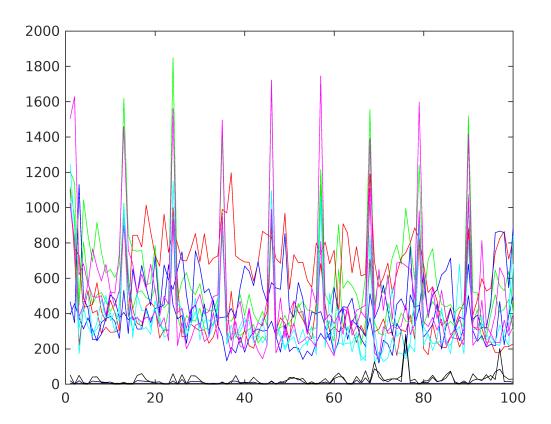

```
clear;clc;%Limpiar
addpath(genpath('./src'))%Carpeta de funciones
datapath = fullfile('./data/');%Carpeta de datos
folderNames=FindFolders(datapath);

allDataT1S1=[];
allDataT2S1=[];
allDataT3S1=[];
allDataT4S1=[];
allDataT5S1=[];
allDataT5S1=[];
```

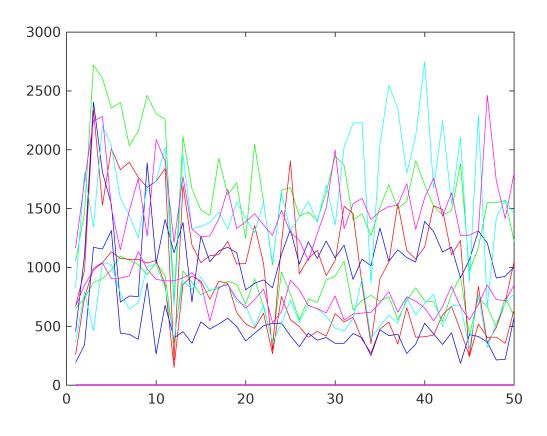

```
allDataT1S2=[];
allDataT2S2=[];
allDataT3S2=[];
allDataT4S2=[];
allDataT5S2=[];
allDataT6S2=[];
for j=1:length(folderNames)
    path1=fullfile(datapath,folderNames(j).name);
    filenames = FindCSV(path1); %Listar todos los archivos CSV
    for i=1:length(filenames)%Recorrer todos los archivos CSV
        data=readtable(fullfile(path1,filenames(i).name)); % Seleccionar CSV
        dataNew=table2array(data(:,2));
       dataNew(isnan(dataNew)) = 0;%Remover NAN numbers
       Label=str2double(filenames(i).name(2)); % Caracter que identifica la tarea
        featureData = [std(dataNew) mean(dataNew)]; %Caracteristicas a usar
        if ((filenames(i).name(4) == "1") && (folderNames(j).name(6) == "1"))
            allDataT1S1=[allDataT1S1;[featureData Label]];
        elseif ((filenames(i).name(4) == "1") && (folderNames(j).name(6) == "2"))
            allDataT2S1=[allDataT2S1;[featureData Label]];
        elseif ((filenames(i).name(4) == "1") && (folderNames(j).name(6) == "3"))
            allDataT3S1=[allDataT3S1;[featureData Label]];
        elseif ((filenames(i).name(4) == "1") && (folderNames(j).name(6) == "4"))
            allDataT4S1=[allDataT4S1;[featureData Label]];
        elseif ((filenames(i).name(4) == "1") && (folderNames(j).name(6) == "5"))
            allDataT5S1=[allDataT5S1;[featureData Label]];
        elseif ((filenames(i).name(4) == "1") && (folderNames(j).name(6) == "6"))

        elseif ((filenames(i).name(4) == "2") && (folderNames(j).name(6) == "1"))
            allDataT1S2=[allDataT1S2;[featureData Label]];
        elseif ((filenames(i).name(4) == "2") && (folderNames(j).name(6) == "2"))
            allDataT2S2=[allDataT2S2;[featureData Label]];
        elseif ((filenames(i).name(4) == "2") && (folderNames(j).name(6) == "3"))
            allDataT3S2=[allDataT3S2;[featureData Label]];
        elseif ((filenames(i).name(4) == "2") && (folderNames(j).name(6) == "4"))
            allDataT4S2=[allDataT4S2;[featureData Label]];
        elseif ((filenames(i).name(4) == "2") && (folderNames(j).name(6) == "5"))
            allDataT5S2=[allDataT5S2;[featureData Label]];
        elseif ((filenames(i).name(4) == "2") && (folderNames(j).name(6) == "6"))
            allDataT6S2=[allDataT6S2;[featureData Label]];
        end
    end
end
```

2- Grafica de datos

```
x = 1:100; %Para Graficar
plot(x, allDataT1S1, 'green', x, allDataT2S1, 'red', x, allDataT3S1, 'blue', ...
```

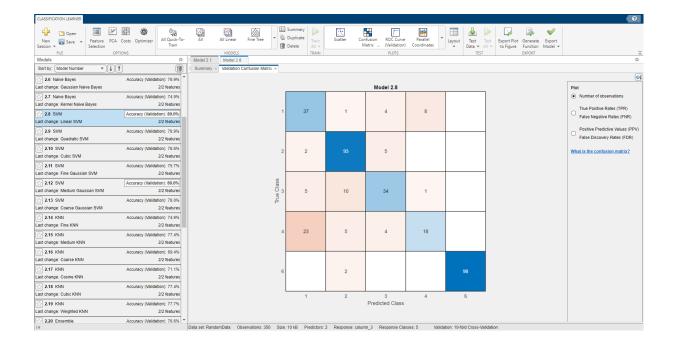

```
x, allDataT4S1, 'cyan', x, allDataT5S1, 'magenta', x, allDataT6S1, 'black')
y = 1:50; %Para Graficar
plot(y, allDataT1S2, 'green', y, allDataT2S2, 'red', y, allDataT3S2, 'blue', ...
```

```
y, allDataT4S2, 'cyan', y, allDataT5S2, 'magenta')
```

3- Classification

```
%Solo se seleccionan los registros clasificables
dataset = [allDataT1S2; allDataT2S1; allDataT3S2; allDataT4S2; allDataT6S1];
[RandomData,IndexRows] = fRandomize_DataRows(dataset);
[Training, Validation] = fsplit_data(RandomData, 0.7);%70% para Training y 30% para Val
```

3- Validation

```
[trainedClassifier, validationAccuracy]=trainClassifierLinearSVM(Training);
yfit = trainedClassifier.predictFcn(Validation(:,1:2));
TrueClass=Validation(:,3);
compare= yfit == TrueClass;
aciertos = sum(compare)
```

aciertos = 90

aciertos/length(compare)

ans = 0.8571
